

COOL-TEC™

HEAT-REFLECTIVE CONCRETE AND WOOD DECK COATING

Features & Benefits

- **COOL-TEC™** is a revolutionary patented IR heat-reflective coating for restoring worn or weathered concrete and wood deck surfaces.
- **COOL-TEC™** can provide reduced surface temperatures of over 50°F* - providing a much cooler, slip-resistant walking surface that is barefoot friendly - even in darker colors.
- **COOL-TEC™** is thicker than ordinary coatings - filling hairline cracks, covering splinters, and hiding imperfections.
- Easy primer-less, roll-on and brush application and easy clean-up is perfect for concrete and wood decks, walkways, patios, pool decks, and balconies.
- Superior finish maintains increased reflectivity values for many years, unlike traditional coatings - even in white!
- Lower surface temperatures lead to increased durability and superior fade resistance – even in darker colors!
- Restores and maintains color for faded and worn wood and concrete decks.
- Advanced formulation incorporates glass microspheres leading to superior scratch, abrasion, and burnish resistance.
- Available in over 570 heat-reflective colors to match your paint scheme.
